

CSU SEISMIC RETROFIT PRIORITY LISTINGS

Revised 9/17/08

As a part of the Trustee's seismic policy, the CSU Office of the Chancellor maintains two lists of existing buildings with hazards, identified by the Seismic Review Board (SRB), considered significant enough to warrant special attention for seismic retrofit.

Priority List 1 identifies buildings that warrant urgent attention and should be seismically retrofitted as soon as resources can be made available regardless of other improvements that may be contemplated in the future for the respective building.

Priority List 2 identifies buildings that must be seismically retrofitted when *any* new construction work occurs on the identified existing building. By Trustee policy, seismic modifications are required for listed projects even when the scope of new construction does not trigger the CBC Part 2, Chapter 34 applicability thresholds (CBC 3415.3.) for seismic evaluation and/or modification.

Both lists are periodically updated to reflect work completed and buildings that may over time be added. The listings are presented alphabetically by campus.

CBC Part 2, Chapter 34 may require seismic evaluation and retrofit for buildings not on these lists.
See Section 3.4 of CSU Seismic Requirements.
